

SELLI MOCK · UNITS 1–2

Simulacro de práctica · Units 1–2 · no cuenta para la calificación

Name: Expediente: Group:

Instructions. 70 multiple-choice items, one point each. Write ONE letter on the line to the left of each item number. Unclear or double answers score zero. **There is no penalty for guessing:** never leave a blank.

- **Part I depends on the recording**, which is played **once** and does not stop: you have 12 seconds after each question. The conversations are NOT printed — you only see the four options.
- Parts II–IV: about 60 minutes. No dictionaries.
- This is **practice**, not a graded exam. Use the profile sheet at the end before you look at any answer: what matters is which row comes out low.

PART I — LISTENING

items 1–16 · one listen · 16 points

Directions. In Part A (1–12) you will hear a short conversation between two people, and then a third voice asks a question. In Part B (13–16) you will hear one longer conversation followed by four questions. **Only the four options are printed.** Choose the best answer.

What is tested is the **same grammar as the rest of the exam**, heard instead of read: the conditional, the past modal, the reported sentence, the passive. The right answer usually **rephrases** what the structure implies; the wrong ones repeat words you heard or reverse the meaning.

Example. You hear — **M:** *Did you finish the lab report?* **W:** *I wish I had started it on Friday.* **N:** *What does the woman mean?*

You read: (A) She finished it on Friday. **(B) She did not start it early enough.** (C) She will start it on Friday. (D) She wants to start it now.

(B) is right: *I wish I had started* says the opposite of what happened (G2).

Part A — items 1–12.

___ 1.

- | | |
|--|--|
| (A) She lives close to the campus but feels too tired. | (B) She spends two hours on campus every Saturday evening. |
| (C) She lives too far away to come on Saturday. | (D) She has already signed up for the extra session. |

___ 2.

- | | |
|--|---|
| (A) They had no way back to the island that night. | (B) They found another way back to the island later that night. |
| (C) The boat was not the only way back that night. | (D) They left the hotel early and caught the last boat. |

___ 3.

- | | |
|--|--|
| (A) She took the statistics workshop with the rest of her group. | (B) She hopes for a statistics workshop again next term. |
| (C) Her whole group spent the weekend on the results. | (D) She missed the workshop that most of her group took. |

___ 4.

- | | |
|--|--|
| (A) He plans to call the department himself. | (B) He wants her to email the professor again tonight. |
| (C) He wants her to call the department instead. | (D) The professor reads her email late at night. |

___ 5.

- | | |
|--|---|
| (A) The lab technician signs the water samples in. | (B) He may use the spectrometer only after the training. |
| (C) He wants to use the spectrometer tomorrow morning. | (D) He can use the spectrometer even without the safety training. |

___ 6.

- | | |
|---|--|
| (A) He missed the bus to the mountains this morning. | (B) The driver of the mountain bus might refuse cards. |
| (C) The driver of the mountain bus does not take cards. | (D) The driver takes only cards on that route. |

___ 7.

- (A) Somebody else took her bike to the security office.
- (B) She moved her bike away from the fire exit.
- (C) She left her bike at the security office on Tuesday.
- (D) She chained her bike next to the security office.

___ 8.

- (A) Nobody has said anything about the old chemistry building.
- (B) The man has read the engineers' report on the building.
- (C) The dean has already confirmed that the building is unsafe.
- (D) People say it is unsafe, but nothing is proven.

___ 9.

- (A) He does not know why the battery went dead.
- (B) He is certain that the laptop battery itself is broken.
- (C) He thinks she should shut the lid more carefully.
- (D) He is nearly sure the screen stayed on overnight.

___ 10.

- (A) He thinks he may have been at the airport cafe.
- (B) He is sure he was not at the airport.
- (C) He does not remember seeing Diego at the airport.
- (D) His train from the coast arrived before six.

___ 11.

- (A) She had to leave the camera behind.
- (B) The supervisor carried the camera to the storeroom.
- (C) The supervisor helped her sign the equipment sheet.
- (D) The supervisor let her take the camera home.

___ 12.

- (A) The deadline is the same and I need them today.
- (B) The deadline had changed before I needed them on Friday.
- (C) The deadline changed, but I do not need them until later.
- (D) The deadline has changed and I need them by Friday.

Part B — items 13–16. One conversation.

___ 13.

- (A) Their bus was stopped by heavy traffic near the campus.
- (B) Their own group was slow to pack up its nets.
- (C) Their bus waited at the river for a second group.
- (D) The driver of their bus took the wrong road back.

___ 14.

- (A) The lab had closed early, so they needed a new date.
- (B) The freezer was off, but they could come back at eight.
- (C) The freezer had broken down, so their samples were now lost.
- (D) The freezer was still on, so they could leave the boxes.

___ 15.

- (A) He is certain nobody told the lab the new time.
- (B) He thinks the lab may have ignored the new time.
- (C) He believes the department cancelled their booking by mistake.
- (D) He is sure the technician wrote the wrong time down.

___ 16.

- (A) The technician would have put their samples in the freezer.
- (B) They would have got a later date for the practice.
- (C) Someone would have waited for them at the lab desk.
- (D) The lab would have stayed open until eight that evening.

PART II — STRUCTURE AND WRITTEN EXPRESSION

items 17–36 · 20 points

Structure (17–28). Choose the option that completes the sentence correctly.

- ___ 17. If the delivery _____ late again, the lab will run out of clean gloves before Friday.
(A) would arrive (B) had arrived
(C) will arrive (D) arrives
- ___ 18. We only have one van, but if the department _____ two, the whole group would travel together on Saturday.
(A) will have (B) has
(C) had (D) would have
- ___ 19. If the driver _____ the map before the trip, the group would not have arrived two hours late.
(A) had checked (B) checked
(C) has checked (D) would check
- ___ 20. If she _____ the safety course last year, she would be allowed to use the laser cutter today.
(A) took (B) would take
(C) had taken (D) has taken
- ___ 21. _____ about the storm earlier, the students would have stayed at the hotel on Friday afternoon.
(A) Did they know (B) Had they known
(C) They had known (D) If they knew
- ___ 22. Now that the results are wrong, Ana wishes she _____ the samples twice before the presentation yesterday.
(A) has tested (B) had tested
(C) tested (D) would test
- ___ 23. The bus leaves in ten minutes, so it is time we _____ our bags and walked to the corner.
(A) have packed (B) pack
(C) packed (D) will pack
- ___ 24. The vaccines must stay in the cold room tonight; _____, all of them will be useless by Monday.
(A) otherwise (B) provided that
(C) in case (D) unless
- ___ 25. The old computers _____ to a nearby school last month, so the room upstairs is empty now.
(A) were sent (B) have been sending
(C) are sent (D) were sending
- ___ 26. At the end of the tour, each visitor _____ a map and a bottle of water by the guide.
(A) was giving (B) has given
(C) gave (D) was given
- ___ 27. _____ that the old tunnel under the university was built more than a hundred years ago.
(A) It is saying (B) They are said
(C) There is said (D) It is said
- ___ 28. Our teacher took us to the old library, _____ has the largest reading room on campus.
(A) who (B) which
(C) what (D) that

Written expression (29–36). One of the four underlined parts is wrong. Choose the letter of the part that must be changed.

- ___ 29. If the campus bus were faster, the students will save about two hours every week during the exam period.
(A) If (B) will save
(C) two hours (D) during
- ___ 30. Our final report would have been at least ten pages shorter if the supervisor would not have asked for extra tables.
(A) would have been (B) ten pages
(C) if (D) would not have asked
- ___ 31. I wish I would have studied French at school, because my company now sends engineers to Lyon every month.

- (A) wish I would have studied (B) because
(C) now (D) to

___ 32. You will not get a refund for your ticket unless you do not cancel it at least two days in advance.

- (A) will not get (B) for
(C) unless you do not cancel (D) at least

___ 33. All the equipment was carefully took to the second floor before the visitors arrived on Tuesday.

- (A) was (B) took
(C) before (D) arrived

___ 34. Our supervisor never lets us leave the lab early, but she always makes us to clean the benches.

- (A) never lets (B) leave
(C) but (D) always makes us to clean

___ 35. During the tour, the guide asked the tired students why were they carrying so much equipment up the hill.

- (A) asked (B) tired
(C) were they carrying (D) up

___ 36. The technician which fixed our lab projector last Friday left a short note about the broken cable.

- (A) technician which (B) last
(C) left (D) about

PART III — VOCABULARY

items 37–50 · 14 points

Choose the option that completes the sentence correctly.

- ___ 37. The queue at the security check was _____ long, but we still reached the gate on time.
(A) extremely (B) absolutely
(C) utterly (D) totally
- ___ 38. The rescue team walked all night, and when they reached the village they were _____ exhausted.
(A) absolutely (B) very
(C) slightly (D) particularly
- ___ 39. The food at the student cafe is very _____, and the prices are lower than in town.
(A) amazing (B) perfect
(C) good (D) excellent
- ___ 40. Marta studies energy and motion, and she wants to become a _____ like her professor.
(A) physically (B) physical
(C) physicist (D) physics
- ___ 41. At university, Ana chose _____ because she wanted to study rocks, volcanoes and earthquakes.
(A) geologist (B) geology
(C) geologically (D) geological
- ___ 42. The technician told us that the fault in the lift was _____, not mechanical.
(A) electrically (B) electricity
(C) electrician (D) electrical
- ___ 43. The airline gave us free meals after a _____ delay at the airport in Lisbon.
(A) four hours (B) four-hours
(C) fourth-hour (D) four-hour
- ___ 44. The hostel had a _____ courtyard where guests could sit and read until late.
(A) good-lit (B) well-lighting
(C) well-lit (D) lit-well
- ___ 45. The department hired a _____ technician to repair the electron microscope in the basement.
(A) highly-trained (B) highly trained
(C) high-trained (D) high trained
- ___ 46. Our cabin was off the _____ track, and the nearest shop was ten kilometres away.
(A) broken (B) hidden
(C) beating (D) beaten
- ___ 47. The agency paid for its logo to appear in a famous cooking show, a clear case of _____.
(A) product placement (B) celebrity endorsement
(C) word of mouth (D) target audience
- ___ 48. Passengers must _____ their suitcases at least two hours before an international flight.
(A) check off (B) check in
(C) check on (D) check out
- ___ 49. The flat is next to a busy road, but the students have learned to _____ the noise at night.
(A) put up with (B) get on with
(C) come up with (D) look up to
- ___ 50. I left my passport at the hotel desk, so I have to go back and _____ before the flight.
(A) pick up them (B) pick up it
(C) pick them up (D) pick it up

Items 51–60 refer to the following passage.

Doing the Experiment Again

[1] Science depends on results that other people can obtain again. When a team publishes a finding, other researchers may run the same experiment themselves. Scientists call this second attempt a replication. The second team uses the same method, the same measurements and, when possible, the same materials. If the result appears again, the original claim becomes stronger. If it does not appear, the field learns something important as well.

[2] Researchers repeat experiments for several practical reasons. The first reason is simple: instruments and people make mistakes. A balance may be badly calibrated, or a number may be copied into the wrong column. Such errors are hard to see from inside the original team, because the members already expect a certain result. A second lab, working with fresh equipment, often notices the problem quickly.

[3] The second reason concerns the conditions of the study. A result may depend on one particular machine, one room, or one group of volunteers. Only a repetition in another place can show if the effect goes beyond that laboratory. The third reason is chance, which no laboratory can fully remove. In any single study, an unusual set of measurements can appear by luck alone. Repetition separates a lucky pattern from an effect that is really there.

[4] Despite these benefits, replication is not popular work. Journals prefer surprising discoveries, and a study that only confirms an old finding is often rejected. Committees that award grants and jobs count original papers, not careful repetitions. Because of this, many young scientists say that replication costs time and brings little credit. Some laboratories run such checks quietly and never report them.

[5] The author disagrees with that habit. A finding that nobody has tested again is only a promise, not a firm result. Universities and journals could fix this if they treated a good replication as a real contribution. Until that happens, the shelves of science hold many claims that nobody has examined twice.

- 51. What is the main idea of the passage?
- (A) Modern instruments are now so accurate that errors in measurement have become rare. (B) Journals should stop printing studies that report surprising or unusual discoveries.
- (C) Most published experiments in science turn out to be wrong when they are repeated. (D) Repeating experiments from other teams protects science, but the system rewards it poorly.
- 52. According to paragraph 2, why are mistakes often hard to notice inside the original team?
- (A) The team members are not trained to calibrate a balance correctly. (B) The people in that team already assume a certain outcome.
- (C) The instruments in that laboratory are usually older than average. (D) The team has to record all of its numbers by hand in columns.
- 53. According to paragraph 3, why does an experiment need to be repeated in a different place?
- (A) To find out if the effect appears away from the first laboratory. (B) To let a much larger number of volunteers take part in the study.
- (C) To make sure the second team follows exactly the same written method. (D) To compare the machines of two laboratories and keep the better one.
- 54. According to paragraph 3, why is repetition needed even when the first team made no mistake?
- (A) Luck decides which of the two laboratories publishes the finding first. (B) Repeated measurements always give exactly the same number in every study.
- (C) Broken machines are usually the cause of the strangest results in a laboratory. (D) Luck alone can produce an unusual set of results in one study.
- 55. What is the author's position on a result that nobody has repeated?
- (A) It is a claim that is still waiting for real support. (B) It should be taken out of the journal that first printed it.
- (C) It is in most cases the result of an error in measuring. (D) It can be trusted whenever the original team worked carefully.
- 56. According to paragraph 4, what do many young scientists say about replication?

- (A) It uses up their time and helps their career very little. (B) It has become the quickest way for them to publish a paper.
- (C) It is much easier than an original study of their own. (D) It should be carried out only by very experienced researchers.

— **57.** According to paragraph 1, what does the second team try to keep the same?

- (A) The authors, the journal and the date of the first publication. (B) The procedure and, where they are available, the original materials.
- (C) The building, the timetable and the money spent on the study. (D) The number of volunteers and the length of their earlier training.

— **58.** According to paragraph 4, what do the committees that award grants and jobs count?

- (A) The laboratories that a researcher has visited during a career. (B) The amount of money that a researcher has received before.
- (C) The number of original papers that a researcher has produced. (D) The private checks that a researcher has repeated in silence.

— **59.** The word “credit” in paragraph 4 is closest in meaning to

- (A) payment (B) recognition
- (C) permission (D) practice

— **60.** The passage suggests that some replication work never becomes public because

- (A) a second team is not allowed to name the first one in print. (B) journals charge a high fee for each extra study that they print.
- (C) the original teams ask for those results to be kept secret. (D) making such a check public brings a laboratory almost no benefit.

Items 61–70 refer to the following passage.

From Letters to Stars

[1] People have written about their journeys for hundreds of years, but the travel guide is a recent invention. The first travellers who described foreign cities wrote letters and diaries for their families and friends. Those pages mixed weather, prices and personal feelings in no fixed order. They recorded one journey; they did not tell the next visitor what to do.

[2] Printed guides written for tourists appeared in Europe in the 1830s, and two names stand out. In Britain, John Murray published a handbook for travellers going to Europe in 1836. In Germany, Karl Baedeker sold small handbooks with the same practical aim. These guides were full of hard information: boat times, train times, hotel prices and distances. A reader could check almost every line against a timetable or a bill.

[3] Opinion entered the printed guides soon afterwards, and it arrived in a very small form. Baedeker began to print stars beside the churches and views that he thought deserved a visit. Later, in 1900, the Michelin brothers gave French drivers a free red book about roads and repairs. In time, that book began to award stars to restaurants, and each star worked as a verdict rather than a fact.

[4] The newest stage of the story gave the writing back to ordinary travellers. Websites now collect short reviews written by the visitors themselves, with a score attached to each one. A hotel is described by many strangers instead of a single editor in an office. The tone of the old diaries has returned, but the audience is the whole world.

[5] The difference between two kinds of sentence still matters for every traveller. When a guide states that a museum closes on Mondays, the claim can be tested at the door. When the same guide calls the museum unforgettable, the sentence reports a feeling and proves nothing. Travellers who confuse the two arrive with expectations that no real place can satisfy.

- ___ 61. What is the main idea of the passage?
- (A) Travel writing changed over time, and each style shapes what travellers expect. (B) Printed guidebooks are more reliable than reviews written by ordinary travellers today.
- (C) The Michelin guide is the most important travel book of the last century. (D) Modern travellers read fewer books than travellers did in the nineteenth century.
- ___ 62. According to the passage, which of these came first?
- (A) Short reviews posted by visitors on websites. (B) Stars printed beside the churches worth seeing.
- (C) Private letters and diaries about one journey. (D) Printed handbooks sold to tourists in Europe.
- ___ 63. The passage indicates that stars first appeared in guidebooks ____.
- (A) at the same time as the first review websites (B) before travellers wrote diaries about their own journeys
- (C) before Murray printed his handbook for European travel (D) after handbooks had begun to list prices and times
- ___ 64. When did the Michelin book begin to award stars to restaurants?
- (A) Before Murray's handbook appeared in Britain in 1836. (B) Before Baedeker printed stars in his own guides.
- (C) After it appeared as a free book for drivers. (D) At the same time as the first review websites.
- ___ 65. Which of these statements is a fact that a reader could check?
- (A) The first Michelin book was given away free in 1900. (B) A museum marked with a star is always worth a long visit.
- (C) Baedeker's handbooks were the finest guides ever made. (D) Old diaries are more charming than the reviews found on websites.
- ___ 66. According to paragraph 5, the two kinds of sentence differ because ____.
- (A) one appears in old guides and the other only in new ones (B) one is written by editors and the other by ordinary travellers
- (C) one can be tested at the place itself and the other cannot (D) one is always true and the other is always false
- ___ 67. Which line in a travel guide would count as opinion, according to the passage?
- (A) A statement of the day when the museum is closed. (B) A line giving the price of a room for one night.
- (C) A note calling a church the most beautiful in the region. (D) A list of the trains that leave for the coast.
- ___ 68. According to the passage, the first printed guides contained mainly ____.

- (A) warm descriptions of the writer's own feelings on the road (B) reviews sent in by readers who had used the hotels
(C) stars marking the churches that deserved a longer visit (D) practical information such as prices, distances and departure times

___ **69.** What does the passage say about the earliest letters and diaries?

- (A) They listed hotel prices in a fixed and useful order. (B) They were meant for friends and family, not for future visitors.
(C) They were printed and sold to tourists in Britain and Germany. (D) They were collected by editors who added stars to them.

___ **70.** In paragraph 3, the word 'verdict' is closest in meaning to ____.

- (A) a mistake in printing (B) a judgment about quality
(C) an invitation to travel (D) a record of prices
