INGLÉS 6 · B1+ · PRACTICE MATERIAL

Prof. Daniel Lara · profe.daniellara

PRACTICE TEST · SECOND PARTIAL · TOEFL FORMAT

Practice for the second partial · Units 8–10 · screen version · does not count for your grade

Instructions. 70 multiple-choice items, one point each, in 75 minutes: the same format and level as the real second partial, with different questions. **Do it in one sitting, with the audio and a clock.** Write your answers on the answer sheet (separate file) or on paper, 1 to 70. No penalty for guessing.

· Parts II–IV: about 60 minutes. You can move freely between pages. In Part IV the passage is repeated next to each group of questions.

· No dictionaries, no translator, no other windows.

· Then check your answers with the answer key with explanations, which your teacher will share.

Part I — Listening (1–16). The recording is played **once** and does not stop: you have 12 seconds after each question. The conversations are NOT on the screen — you only see the four options. Keep the page of the item you are hearing open.

Example. You hear — **M:** *Are you taking the bus to the stadium on Sunday?* **W:** *No, my brother is driving me there in his new car.* **N:** *What does the woman mean?*

You read: (A) She is taking the bus to the stadium. (B) Her brother drives a bus on Sundays. **(C) Her brother is going to give her a ride.** (D) She is driving her brother to the stadium. **(C)** is right: My brother is driving me there is an arrangement for the future: he will take her.

PART I — LISTENING

items 1–16 · one listen · 16 points

Part A — items 1–12 (short conversations).

1.

(A) The speaker made the topic easy to understand.
(B) Only the business students could follow her.
(C) He did not like the way the engineer spoke.
(D) The business students explained the topic to him.

2.

(A) Send her manager a report before every game.
(B) Stay home to finish her report tonight.
(C) Arrive at the game a little later.
(D) Send the report from the basketball game.

3.

(A) He usually arrives at ten every day.
(B) He is late and cannot be reached.
(C) He told them he could not come.
(D) He is painting the classroom right now.

4.

(A) She studies at home before seven every day.
(B) She is helping to put up the new building.
(C) She has already moved to a quieter place.
(D) She may not tolerate the noise much longer.

5.

(A) Students will start playing tennis there again.
(B) They will soon be used for something else.
(C) They are going to be repaired for players.
(D) They became a garden with benches last month.

6.

(A) Bring the man to her class tomorrow.
(B) Wait for the professor outside her office tomorrow.
(C) Return the books during a class she attends.
(D) Make an appointment to see the professor.

7.

(A) Sharing the survey online, not on paper.
(B) Printing the survey before sending the link.
(C) Handing out paper copies in the cafeteria.
(D) Printing fewer copies to save some paper.

8.

(A) Her plan to ride again did not work out.
(B) She started riding again earlier this week.
(C) She has never learned how to ride a bike.
(D) She rides her bike to campus every day.

9.

(A) The place might have a few free tables.
(B) The place will almost certainly be crowded.
(C) The place opens only on Friday nights.
(D) The place was full when it opened last week.

10.

(A) She is busy until midday but can help later.
(B) She will help him move early in the morning.
(C) She wants him to come to the hardware store.
(D) She will start her shift right after lunch.

11.

(A) It made signing up much faster for him.
(B) He is supposed to download it today.
(C) It lets students choose only four classes.
(D) It did not work as well as expected.

12.

(A) She has never been to the science museum.
(B) She works at the museum every Saturday.
(C) She visited the museum in her first semester.
(D) She went at last, after a long delay.

Part B — items 13–16. One longer conversation.

13.

(A) Which questions they will ask Rosa at the market.
(B) How to finish the film despite some problems.
(C) How to connect their microphone to a phone.
(D) Why the graduation ceremony was moved to Saturday.

14.

(A) Professor Vega needs it for the screening.
(B) The media center wants to repair it.
(C) It will be needed at another event.
(D) They have kept it longer than allowed.

15.

(A) In the library's editing room on Monday morning.
(B) At the pizza place where her roommate works.
(C) At the market, right after the interview with Rosa.
(D) At the woman's home, on her roommate's computer.

16.

(A) She told them to record the interview with a phone.
(B) She cares most about the quality of the image.
(C) She will probably accept a phone recording.
(D) She will be working at a pizza place on Sunday.

PART II — STRUCTURE AND WRITTEN EXPRESSION

items 17–36 · 20 points

Structure (17–28). Choose the option that completes the sentence correctly.

17. _____ before the competition is more practice time, not another expensive tool.

(A) What does our team need
(B) The what our team needs
(C) That our team needs
(D) What our team needs

18. _____ the new elevator will be ready by Monday is still unclear, so everyone is using the stairs.

(A) Whether
(B) It
(C) What
(D) If

19. Excuse me, could you tell me _____ for the airport?

(A) what time does the next bus leave
(B) what time the next bus leaves
(C) what time the next bus leave
(D) what time leaves the next bus

20. The new bike-sharing service on campus _____ start in January, but nobody knows the exact date yet.

(A) is likely that
(B) is likely
(C) is probable to
(D) is likely to

21. By the time the visitors arrive next Friday, the workers _____ every room in the new building.

(A) will have cleaned
(B) had cleaned
(C) have cleaned
(D) will have clean

22. In addition to _____ the final exam, every student in the course must give a short presentation in December.

(A) taken
(B) be taking
(C) taking
(D) take

23. At the campus coffee shop, Sofia is responsible _____ the espresso machine before she goes home every night.

(A) of cleaning
(B) for cleaning
(C) for clean
(D) in cleaning

24. The pool on campus _____ this summer, so students will use the city pool until September.

(A) is going to repair
(B) going to be repaired
(C) is going to be repair
(D) is going to be repaired

25. Because the professor is at a conference, the lab reports until next Wednesday.

(A) won't graded
(B) won't be grade
(C) won't be graded
(D) won't grade

26. Yesterday, Marco _____ pour the concrete when the teacher noticed that the mix was too dry.

(A) was about
(B) is about to
(C) was about to
(D) used to

27. Ten years ago, few people believed that the old train station a library, but today it is always full.

(A) would became
(B) would become
(C) becomes
(D) will become

28. The scholarship office will publish the list of winners at noon, so by lunchtime Irene _____ if she is on it.

(A) will know
(B) will be knowing
(C) will knowing
(D) will be know

Written expression (29–36). One of the four underlined parts is wrong. Choose the letter of the part that must be changed.

29. Our group spent an hour arguing about that we should build the greenhouse with aluminum or wood.

(A) spent
(B) that
(C) should build
(D) or

30. Before the graduation party, Julio called his sister because he could not decide what wear.

(A) called
(B) because
(C) could not
(D) what wear

31. We cannot start the experiment until the new samples will arrive from the hospital.

(A) cannot
(B) until
(C) will arrive
(D) from

32. By bring food from home instead of buying lunch at the cafeteria, many students save a lot of money.

(A) By bring
(B) instead of
(C) at
(D) save

33. Our dance teacher hates it when people arrive late, so she insists on to start every class at exactly seven.

(A) hates
(B) when
(C) arrive
(D) on to start

34. The quiet study rooms on the third floor can be book online up to a week in advance.

(A) quiet
(B) on
(C) can be book
(D) up to

35. The mechanic is supposed to fix my car last Thursday, but he has not called me since then.

(A) is supposed to
(B) but
(C) has not called
(D) since

36. There is no need to pay for delivery; I will passing the print shop on my way to campus tomorrow, so I can pick up the posters.

(A) to pay
(B) will passing
(C) on
(D) so

PART III — VOCABULARY

items 37–50 · 14 points

Choose the option that completes the sentence correctly.

37. Halfway through the biology class, we _____ gloves, so the teacher sent me to the storeroom to get another box.

(A) kept up with
(B) ran out of
(C) put up with
(D) cut down on

38. Ana copied her lab report from a website, but she didn't it, because the teacher checks every report with special software.

(A) come up against
(B) put up with
(C) catch up with
(D) get away with

39. The public library in my town wants to _____ its old rooms with touch screens, robots and better lights.

(A) modern
(B) modernize
(C) modernization
(D) modernify

40. Two bikes cannot pass each other in the bike lane next to the gym, so the university will _____ it by one meter.

(A) simplify
(B) sharpen
(C) activate
(D) widen

41. Carmen got a summer job at a _____ near her town, where machines make thousands of plastic bottles for drinking water every day.

(A) water factory bottle
(B) factory water bottle
(C) water bottle factory
(D) bottle water factory

42. On Friday we have a _____ physics exam, so the teacher told us to bring water and a snack.

(A) three hours
(B) three-hour
(C) three hour's
(D) three-hours

43. Our boss wears a suit from Monday to Thursday, but on Fridays he likes to _____ and comes in jeans and a hoodie.

(A) wear out
(B) dress down
(C) overdress
(D) dress up

44. At my brother's office, the dress code is _____: nobody needs a suit or tie, but jeans and sneakers are too informal.

(A) formal
(B) weekend casual
(C) business casual
(D) casual

45. When my classmates say 'I'll google it', they use the name of a company as a verb, which is an example of _____.

(A) initialism
(B) borrowing
(C) conversion
(D) abbreviation

46. In the computer lab, nobody says 'Universal Serial Bus'; we say U-S-B letter by letter, so USB is _____.

(A) an initialism
(B) a compound
(C) a blend
(D) an acronym

47. After an hour of chatting about the weekend, the team finally _____ business and planned the whole project in thirty minutes.

(A) got down to
(B) stuck with
(C) put off
(D) stressed out

48. Marcos is afraid of the dentist, so he keeps _____ his appointment, and now his tooth hurts every night.

(A) sticking with
(B) getting down to
(C) getting around to
(D) putting off

49. Rodrigo wanted to run ten kilometers in under fifty minutes, and last Sunday, after a year of training, he finally _____ that goal.

(A) reached
(B) set
(C) overcame
(D) won

50. The new microscope in our lab is _____: it was expensive, but students have used it only twice this year.

(A) unused
(B) misused
(C) underused
(D) overused

Clothes Made to Measure

[1] Most clothes are made in a few standard sizes, but human bodies come in many more shapes. As a result, many online shoppers order one item in two sizes and return one. At the end of every season, shops are also left with piles of unsold clothes. Some companies are now trying another approach: clothes made to measure for each buyer.

[2] Today the process usually starts with a body scan, which can be done at home or in a shop. The customer turns slowly in front of a phone camera, and the software calculates dozens of measurements. These numbers are sent to a small factory, where a machine cuts the fabric for that one person. Since nothing is made until a customer has paid, the factory never needs to guess which sizes will sell.

[3] Supporters hope that the system will solve two old problems at once. First, shoppers who receive clothes that really fit are likely to send fewer of them back. Second, factories will produce only what customers have ordered, so fewer clothes will be stored in warehouses or thrown away. Some designers believe that this change could make fashion a much less wasteful industry.

[4] However, there are still two serious doubts about the idea: price and privacy. At the moment, made-to-measure clothes usually cost more than ordinary ones, because each piece is cut and checked separately. Many customers are also worried about giving a company an exact copy of their body. They want to know where their measurements will be stored and who will be allowed to see them.

[5] A few years ago, some supporters expected that body scanners would be in every shopping center by now. Today, however, most shoppers still buy ready-made clothes in the usual standard sizes. Prices might come down as scanners and cutting machines become cheaper to buy. In that case, many shoppers will probably stop choosing between small, medium and large.

PART IV — READING items 51–70 · 20 points

Items 51–60 refer to the passage on the left.

51. Which of the following best states the main idea of the passage?

(A) Body scanners have now replaced standard sizes in most clothes shops around the world.
(B) Made-to-measure clothes could cut returns and waste, but price and privacy are still problems.
(C) Clothes made from body scans have already solved the problem of unsold clothes.
(D) Online shoppers should always order each item in two sizes and return the one that does not fit.

52. The word "unsold" in paragraph 1 is closest in meaning to

(A) made with poor fabric
(B) sold at a lower price
(C) not finished yet
(D) not bought by anyone

Clothes Made to Measure

[1] Most clothes are made in a few standard sizes, but human bodies come in many more shapes. As a result, many online shoppers order one item in two sizes and return one. At the end of every season, shops are also left with piles of unsold clothes. Some companies are now trying another approach: clothes made to measure for each buyer.

[2] Today the process usually starts with a body scan, which can be done at home or in a shop. The customer turns slowly in front of a phone camera, and the software calculates dozens of measurements. These numbers are sent to a small factory, where a machine cuts the fabric for that one person. Since nothing is made until a customer has paid, the factory never needs to guess which sizes will sell.

[3] Supporters hope that the system will solve two old problems at once. First, shoppers who receive clothes that really fit are likely to send fewer of them back. Second, factories will produce only what customers have ordered, so fewer clothes will be stored in warehouses or thrown away. Some designers believe that this change could make fashion a much less wasteful industry.

[4] However, there are still two serious doubts about the idea: price and privacy. At the moment, made-to-measure clothes usually cost more than ordinary ones, because each piece is cut and checked separately. Many customers are also worried about giving a company an exact copy of their body. They want to know where their measurements will be stored and who will be allowed to see them.

[5] A few years ago, some supporters expected that body scanners would be in every shopping center by now. Today, however, most shoppers still buy ready-made clothes in the usual standard sizes. Prices might come down as scanners and cutting machines become cheaper to buy. In that case, many shoppers will probably stop choosing between small, medium and large.

Items 51–60 refer to the passage on the left.

53. Which statement best expresses the main idea of paragraph 2?

(A) Each piece of clothing is cut for one person from that person's own scan.
(B) Customers have to visit a shop with a scanner before they can order clothes.
(C) Small factories have become very good at guessing which sizes people will buy.
(D) The body measurements are sent to a small factory after each scan.

54. What can be inferred from paragraphs 1 and 2 about factories that make clothes in standard sizes?

(A) They make each piece only after a customer has paid for it.
(B) They make every piece of clothing in one single size for all their customers.
(C) They must decide how many of each size to make before anyone buys.
(D) They already use body scans to choose which sizes to make.

Clothes Made to Measure

[1] Most clothes are made in a few standard sizes, but human bodies come in many more shapes. As a result, many online shoppers order one item in two sizes and return one. At the end of every season, shops are also left with piles of unsold clothes. Some companies are now trying another approach: clothes made to measure for each buyer.

[2] Today the process usually starts with a body scan, which can be done at home or in a shop. The customer turns slowly in front of a phone camera, and the software calculates dozens of measurements. These numbers are sent to a small factory, where a machine cuts the fabric for that one person. Since nothing is made until a customer has paid, the factory never needs to guess which sizes will sell.

[3] Supporters hope that the system will solve two old problems at once. First, shoppers who receive clothes that really fit are likely to send fewer of them back. Some designers believe that this change could make fashion a much less wasteful industry.

[4] However, there are still two serious doubts about the idea: price and privacy. At the moment, made-to-measure clothes usually cost more than ordinary ones, because each piece is cut and checked separately. Many customers are also worried about giving a company an exact copy of their body. They want to know where their measurements will be stored and who will be allowed to see them.

[5] A few years ago, some supporters expected that body scanners would be in every shopping center by now. Today, however, most shoppers still buy ready-made clothes in the usual standard sizes. Prices might come down as scanners and cutting machines become cheaper to buy. In that case, many shoppers will probably stop choosing between small, medium and large.

Items 51–60 refer to the passage on the left.

55. The word "wasteful" in paragraph 3 is closest in meaning to

(A) using more materials than it needs
(B) charging shoppers more than it should
(C) made from waste materials
(D) slow to accept new ideas

56. Which of these phrases from the passage expresses the least certainty?

(A) "will probably stop" (paragraph 5)
(B) "might come down" (paragraph 5)
(C) "are likely to send" (paragraph 3)
(D) "will produce" (paragraph 3)

57. According to paragraph 4, why do made-to-measure clothes usually cost more than ordinary ones?

(A) The fabric is better than the fabric of ordinary clothes.
(B) Shops pay for all the clothes that are sent back.
(C) Each piece is cut and checked on its own.
(D) Customers pay extra to keep their data private.

Clothes Made to Measure

[1] Most clothes are made in a few standard sizes, but human bodies come in many more shapes. As a result, many online shoppers order one item in two sizes and return one. At the end of every season, shops are also left with piles of unsold clothes. Some companies are now trying another approach: clothes made to measure for each buyer.

[2] Today the process usually starts with a body scan, which can be done at home or in a shop. The customer turns slowly in front of a phone camera, and the software calculates dozens of measurements. These numbers are sent to a small factory, where a machine cuts the fabric for that one person. Prices might come down as scanners and cutting machines become cheaper to buy. In that case, many shoppers will probably stop choosing between small, medium and large.

Items 51–60 refer to the passage on the left.

58. According to paragraph 4, what do many customers want to know?

(A) which shops near their homes have a body scanner
(B) where their measurements will be kept and who can see them
(C) how long it will take to cut and send their clothes
(D) why made-to-measure clothes cost more than ordinary ones

59. Which of the following does the passage present as a fact about the present, not a prediction?

(A) Shoppers now send back far fewer clothes than they did before.
(B) A body scan can be done with a phone camera.
(C) Made-to-measure clothes now cost less than they used to.
(D) The fashion industry has become much less wasteful.

Clothes Made to Measure

[1] Most clothes are made in a few standard sizes, but human bodies come in many more shapes. As a result, many online shoppers order one item in two sizes and return one. At the end of every season, shops are also left with piles of unsold clothes. Some companies are now trying another approach: clothes made to measure for each buyer.

[2] Today the process usually starts with a body scan, which can be done at home or in a shop. The customer turns slowly in front of a phone camera, and the software calculates dozens of measurements. These numbers are sent to a small factory, where a machine cuts the fabric for that one person. Since nothing is made until a customer has paid, the factory never needs to guess which sizes will sell.

[3] Supporters hope that the system will solve two old problems at once. First, shoppers who receive clothes that really fit are likely to send fewer of them back. Second, factories will produce only what customers have ordered, so fewer clothes will be stored in warehouses or thrown away. Some designers believe that this change could make fashion a much less wasteful industry.

[4] However, there are still two serious doubts about the idea: price and privacy. At the moment, made-to-measure clothes usually cost more than ordinary ones, because each piece is cut and checked separately. Many customers are also worried about giving a company an exact copy of their body. They want to know where their measurements will be stored and who will be allowed to see them.

[5] A few years ago, some supporters expected that body scanners would be in every shopping center by now. Today, however, most shoppers still buy ready-made clothes in the usual standard sizes. Prices might come down as scanners and cutting machines become cheaper to buy. In that case, many shoppers will probably stop choosing between small, medium and large.

Items 51–60 refer to the passage on the left.

60. Paragraph 5 mentions what some supporters expected a few years ago. What does the paragraph show about that prediction?

(A) It has already come true, since scanners are now in every shopping center.

(B) It is a fact that the writer checked in shopping centers.

(C) It is about what will happen a few years from now.

(D) It has not come true, since most shoppers still buy standard sizes.

Music While You Study?

[1] In any university library, many students study with earphones in their ears. Some say that music is what keeps them at a desk all evening. Others cannot think with any sound and look for the quietest corner they can find. The question of whether music helps or harms study has no simple answer, but both sides have good reasons.

[2] Many students find that music makes long study sessions easier to face. Boring tasks, such as copying notes or solving similar exercises, seem shorter with a favorite song. Music can also cover the noise of a busy home or a crowded cafeteria. For students who often delay their work, pressing play can become a signal to start.

[3] But what happens when the task is reading a long and difficult chapter? For this kind of work, songs with words often do more harm than good. The words of the song compete with the words on the page for attention. A student may reach the end of a page and realize that she remembers nothing. She then has to reread it, so the music has made the work longer, not shorter.

[4] Music can also steal study time in ways that students rarely notice. A student who was going to study for an hour may spend a large part of it choosing songs. Each time she skips a song, her phone is back in her hand, one tap away from her messages. Later she may believe that she studied all evening, although much of that time went into the music.

[5] In the end, the most sensible answer is to match the sound to the task. A favorite playlist can help students stick with routine work, such as copying notes. For reading and memorizing, however, a quiet room is usually the safer choice. Students who are not sure can compare what they remember after reading with and without music, instead of trusting their feelings.

Items 61–70 refer to the passage on the left.

61. According to paragraph 1, what do students who "cannot think with any sound" do?

(A) They stay at a desk in the library all evening.
(B) They wear earphones without playing any music.
(C) They study at home instead of in the library.
(D) They look for the quietest place they can find.

62. Which of the following is NOT given in paragraph 2 as a reason for studying with music?

(A) It covers the noise of a busy place.
(B) It makes boring tasks seem shorter.
(C) It helps students remember what they read.
(D) It can be a signal to start working.

Music While You Study?

[1] In any university library, many students study with earphones in their ears. Some say that music is what keeps them at a desk all evening. Others cannot think with any sound and look for the quietest corner they can find. The question of whether music helps or harms study has no simple answer, but both sides have good reasons.

[2] Many students find that music makes long study sessions easier to face. Boring tasks, such as copying notes or solving similar exercises, seem shorter with a favorite song. For reading and memorizing, however, a quiet room is usually the safer choice. Students who are not sure can compare what they remember after reading with and without music, instead of trusting their feelings.

Items 61–70 refer to the passage on the left.

63. How is paragraph 3 related to paragraph 2?

(A) It turns from reasons for music to a reason against it.
(B) It explains how music can cover the noise of a busy home.
(C) It gives more examples of the benefits in paragraph 2.
(D) It shows that every reason in paragraph 2 is false.

64. Which sentence is the topic sentence of paragraph 3?

(A) The words of the song compete with the words on the page for attention.
(B) She then has to reread it, so the music has made the work longer, not shorter.
(C) But what happens when the task is reading a long and difficult chapter?
(D) For this kind of work, songs with words often do more harm than good.

Music While You Study?

Items 61–70 refer to the passage on the left.

65. The word "reread" in paragraph 3 is closest in meaning to

(A) read only part of it
(B) read it again
(C) read it aloud
(D) read it more slowly

66. What can be inferred from paragraph 3 about music without words?

(A) It is just as harmful for reading as songs with words are.
(B) It is the main reason why students have to reread pages.
(C) It is probably less of a problem for reading than songs with words.
(D) It helps students read a difficult chapter much faster than a quiet room does.

Music While You Study?

[1] In any university library, many students study with earphones in their ears. Some say that music is what keeps them at a desk all evening. Others cannot think with any sound and look for the quietest corner they can find. The question of whether music helps or harms study has no simple answer, but both sides have good reasons.

[2] Many students find that music makes long study sessions easier to face. Boring tasks, such as copying notes or solving similar exercises, seem shorter with a favorite song. Music can also cover the noise of a busy home or a crowded cafeteria. For students who often delay their work, pressing play can become a signal to start.

[3] But what happens when the task is reading a long and difficult chapter? For this kind of work, songs with words often do more harm than good. The words of the song compete with the words on the page for attention. A student may reach the end of a page and realize that she remembers nothing. She then has to reread it, so the music has made the work longer, not shorter.

[4] Music can also steal study time in ways that students rarely notice. A student who was going to study for an hour may spend a large part of it choosing songs. Each time she skips a song, her phone is back in her hand, one tap away from her messages. Later she may believe that she studied all evening, although much of that time went into the music.

[5] In the end, the most sensible answer is to match the sound to the task. A favorite playlist can help students stick with routine work, such as copying notes. For reading and memorizing, however, a quiet room is usually the safer choice. Students who are not sure can compare what they remember after reading with and without music, instead of trusting their feelings.

Items 61–70 refer to the passage on the left.

67. Which sentence states the main idea of paragraph 4?

(A) Music can also steal study time in ways that students rarely notice.
(B) Later she may believe that she studied all evening, although much of that time went into the music.
(C) A student who was going to study for an hour may spend a large part of it choosing songs.
(D) Each time she skips a song, her phone is back in her hand, one tap away from her messages.

68. According to paragraph 5, what can students who are not sure do?

(A) compare what they remember after reading with and without music
(B) study only in a quiet room for a whole week
(C) ask a teacher which kind of music is best
(D) trust their feelings about which songs help them

69. Where does the writer finally land on the question of music and study?

(A) Students should never listen to music while they study.
(B) Music is useful only for students who study in noisy places.
(C) Music helps with every task if students choose the right songs.
(D) Music suits routine tasks, but quiet usually works better for reading.

70. Where would this passage most likely appear, and why was it written?

(A) in an advertisement, to sell a new kind of earphones
(B) in a science journal, to report the results of an experiment
(C) in a study guide for students, to give them practical advice
(D) in a music magazine, to review some of the new albums
